

# INVITATION FOR MENTORING

## WHAT IS NORDICHACK?

NordicHack is a local hosted, **24-hour hackathon** with the aim of engaging students into challenging extra-curricular activities. The hackathon will take place at **UCN's campus Sofiendalsvej** between the **23rd** and **24th** of **February 2018**.

## WHAT IS IT GOING TO BE ABOUT?

The theme of the hackathon is “**imagine tomorrow by hacking today**” and we are looking for any innovative hacks that can potentially be built/ prototyped within **24 hours**. Participation will be free of charge and it will be open to students or graduates who have graduated within one year prior to the event. We are aiming at an approximate of **75 – 100 participants** or more. The participants will be divided into **teams of 3 to 5**.

## WHAT WE NEED?

Besides our partners and sponsors, we also need **mentors**, that's why we reached out to you! Mentors will provide guidance to the participating teams for a few hours each day during the hackathon. We expect at least 4 hours of mentorship in total.

## WHAT CAN YOU HELP US WITH?

As mentioned before, the main purpose of the mentors is to **provide guidance** to the teams throughout the event. Participants will need guidance within the fields of **innovation, programming, design, business** and **communication**. Due to your experience and skills, we thought **you'd** be a great fit as a mentor!

## WHAT WILL YOU GET OUT OF THIS?

Besides the coolness of helping out the participants to our hackathon, we will be providing **food** and **snacks** throughout the event. You will also get a distinctive element (such as a **T-shirt**) that will make you stand out of the crowd, being able to be reached out by the participants.

## WHAT TO DO WITH ALL THIS INFORMATION?

Just let us know if you are in by writing us an email at **ab@nordichack.com** no later than **05.02.2018**. Also, a meeting prior to the event will be set soon so you can have all details about what, where, when and how!

We look forward to hearing back from you !

The **NordicHack** team
